A MESSAGE FROM ERNIE CRIST;

An American University charged with completing an atlas of the universe (i.e. the Universe we think we know) has concluded its task and has determined that our Universe contains 125 billion galaxies that is 125 billion. Given that we have roughly 6 billion humans on the globe, this translates to 20 galaxies each. I have already selected mine with an option of twenty more in the future. Each Galaxy, depending on size, contains between 40 billion and 1 trillion stars. Our Galaxy, the Milky Way is a spiral galaxy and contains an estimated 300 billion stars while our adjacent sister Galaxy, the Andromeda Galaxy, contains an estimated 400 billion Stars.

Quantum Physics SUGGESTS THAT OUR 4 dimensional Universe is but one of many multi dimensional universes co existing within a fraction of an atom side by side. But no matter how good YOUR binoculars, you can never see it - jealousy on our part would only distract us form our "important" work while we are here. God has thought of everything. Quantum Physics which nobody really understands, also suggests that, there are as many as 11 dimensions. I personally have always believed that there are twelve with God having reserved the twelfth for himself - that is what I would do - you can never be sure how far that greedy earthling creature will go.

Another one of the quantum physics theories is that the Universe consists of two giant panels charged with a positive and negative force and that when the two, both of whom attract and repulse each other like two lovers, collide and make love every 100 billion years or so (talking about getting old) they create a rather large amount of energy which gives rise to a universe. According to this theory, the two forces, after coming together, and doing their thing, are driven apart by the collision but ultimately come together again producing yet another collision in yet another 100 billion year go around. This is in line with Hinduism according to which there is no beginning or end but merely an endless cycle of creation and destruction. Nothing gets lost in this Universe not even a single thought which is rather frightening, if you ask me. That is because there are certain things I would rather forget for good.

If you want to know what possessed me to pass this second hand information on to you it is only to dispel any notion that the District budget is all I care about. The other thing I wanted you to know is that I have about as much influence over one as I have over the other, as much as a gnat burping in a typhoon.

Yours truly,

Ernie Crist
