On another environmental note I wonder if Council would take the initiative and write to the Provincial Government re putting electrical waste, computers etc in the Land Fill. According to the Provincial Government a few years back they said they were working on this. However it obviously is not a priority. Other Provinces already recycle their e-waste as they are calling it. I happen to worry considerably about this as cel phones, computers etc are considered obsolete soon after purchasing. They are going in to the land fill including old stereos, out of date large speakers etc etc, the amount going into land fill is enormous. I have an old system with huge speakers that my kids have replaced with a small hi -tec unit. It is wonderful takes up so little space. However I still have the huge speakers and old unit using up my valuable storage space but I cannot bring myself to put it in the land fill. No-body wants it including me. regards Maureen Bragg
