A MESSAGE FROM ERNIE CRIST

The previous e-mail was sent to you by mistake, I guess, I pressed the wrong button. Below is the corrected version - my apologies.

Ernie Crist

Subject: RE: Natural Steps and pesticide-use

The real issue and the one that Dr. Kost completely missed is not whether or not pesticides are safe or not per se but the fact that it is the corporations and the government, largely under corporate control, who told us that they are harmless. That point is crucial to the argument.

The question as to whether you can trust or not trust what it says on a label attached to a corporate produced can of pesticides reminds me of an old proverb which goes something like this "he who lies but once will not be believed again though may he speak the truth". Did you notice that the door is always left open by stating "harmless if used according to instructions". Are corporations lying? yes, they are, or at least exaggerating more often than not. Have they lied in the past? indeed they have - over and over again. There is hardly a day where we do not learn from reports that this is the case, including that pesticides and chemical agents are harmless. People pay dearly for those lies sometimes with their lives.

The key issue is that corporations today are the principle controllers of society including all levels of government and their agencies. Corporate influence reaches into every nook and cranny. This includes education, science, immigration, our economy, even the judicial and justice system and certainly our media and everything else of importance. Morality is that which serves corporations. If you don't believe this, watch the next TV program containing more than its share of gratuitous violence made possible by corporate paid commercials. Does this mean they are lying all the time, no. Does that mean they are not making good products? No, it does not mean that either. What it does mean, is that we cannot trust them to speak the truth.

In a society where corporations constitute the principle power, it is up to government to establish controls commensurate with the need to protect its citizens. Governments are supposed to be neutral but they are nothing of the sort, not anywhere but especially not in Canada and the US. Governments in both countries are today mainly extensions of global and mainly US corporations. Governments are doing the corporate bidding in each and every step of our lives.

The matter has been dealt with extensively over the last 50 years, including by some of the most outstanding scholars and intellectuals such as Sir John Kenneth Galbraith who, in his book "The New Industrial State" analyzed the corporation and its role in the modern state. Noam Chomsky, a distinguished American scholar and intellectual, dealt extensively with the corporate controlled media in more than one of his books.

The public, through its democratic system i.e. the electoral process, has a certain influence over its government and the state but it is marginal at best. It is much like controlling the flight of a Boeing 747

from one of its passenger seats. Do you honestly believe that the newly elected MP Don Bell will risk his career to represent the interests of his constituents? Or do you think he will do as he is told by his corporate friends who have elected him and who are looking to him for help to push their agenda in Ottawa.

If the State were indeed neutral, Canada would not have a dollar worth 82 cents. Canada, because it has untold natural wealth and a hard working and skilled work force, could easily have the highest standard of living in the world; so why does it not? Take a guess? Do you honestly believe that the number one representative of corporate America in Canada namely the American ambassador would dare state in public and while in Canada that "we will develop the Alberta Tar Sands" unless he knew that the government of Canada is subservient to corporate America?

Or do you think that the Government of Canada would dare take money from the Unemployment Insurance Fund taken from the workers of Canada and put it into general revenue for the benefit of corporate Canada? Or do you think it is an accident that the very first step of the Campbell Liberals, following their election, was to give a tax break to corporations while eliminating social programs and having a good time downloading to municipalities?

And now Dr. Kost is asking us to trust what it says on the label of a can of pesticides sold by one of those corporations - I don't think so. And that is the issue which underlies all other issues. I did ask several housewives who have used some of the pesticides in question whether they trust what it says on the label and the answer was virtually a unanimous NO. The children got a skin rash and the dog got a cough, some of them said. I rest my case.

I fully agree. I just disagree that pesticides like 2,4-D in Weed-and-Feed, when used as directed, are harmful - either to the user, the neighbours, or the environment.

> *The evidence*

> *that pesticides are harmful is overwhelming and so is the fact that*

> *and/or the environment.*

The evidence is certainly not overwhelming. In fact, from the scientific point of view there is no evidence at all that pesticides like 2,4-D is harmful when used as directed.

I have no vested interest in any companies promoting pesticides. I rarely use ANY of these products. I am a strong common-sense supported for a healthy environment. I am not intimidated by either side of any debate.

I am for reason over emotion, for fact over guesswork, and dealing with issues in a sustainable fashion. The risk, if any, of using government approved pesticides is being taken by the private user, on private property. There is no external impacts that science is aware of (if the products are properly used).

Good point, but we still buy automobiles from the same factories that were used to drive the machinery of past wars. I recall WW1 companies making mustard gas (Chlorine) - and they now make it for peaceful uses - that have given enormous health benefits. Make no mistake about this - if a product should be declared unsafe - these same companies will be producing the new ones - and be making more money in the process.

Similarly, we should welcome with open arms, even if they won't admit their errors, those who are inadvertently setting back the environmental movement by misleading the people with unsubstantiated fear mongering.
